TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

01 / Media Pool and project settings

Establish frame rate, media locations and timeline structure.

01 Create a project and set the intended timeline frame rate before editing. Decide the delivery size and whether the brief is SDR or HDR.

02 Import camera files to the Media Pool and group them into bins for interview, B-roll, audio and graphics. Name the main timeline with a version number.

03 If needed, generate proxy media and compare playback with and without proxies. Keep original source folders available for the final render.

PRACTICE DEMO

Create a 1080p practice timeline at the intended frame rate and import four clips, then move one clip to a different bin without changing the file on disk.

QUICK CHECK / FAQ

If footage is offline, check the Media Pool paths and relink before you spend time grading or exporting.

TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

02 / Edit page and trimming

Learn where edits land and which changes alter duration.

01 Load a source clip in the viewer and mark In and Out. Check video and audio destination tracks before inserting or overwriting.

02 On V1, build a dialogue spine. Place B-roll on V2 and watch the active audio routing when you patch a new shot.

03 Make one ripple trim and one roll trim. The first changes sequence duration, while the second shifts the cut between adjacent clips without changing the combined duration.

PRACTICE DEMO

Remove three seconds of hesitation, then move a cut by five frames with a roll trim. Check nearby audio and total duration after each change.

QUICK CHECK / FAQ

If a cut lands on the wrong track, inspect track targeting and locks. Undo first, then repeat the edit with the correct targets.

TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

03 / Fairlight and captions

Separate dialogue, ambient sound and effects.

01 Label audio tracks by purpose. Set clip gain for inconsistent recording levels, then use track faders to balance the mix.

02 Try subtractive EQ or gentle cleanup on one problem clip and compare with bypass. Use room tone and short crossfades to smooth edits.

03 Add or import subtitles. Play through the dialogue and check words, timings and line breaks, then choose a sidecar file or a burn-in to suit the brief.

PRACTICE DEMO

Create a 20-second section with consistent dialogue and two clean audio cuts. Listen on headphones and laptop speakers.

QUICK CHECK / FAQ

If a track sounds silent, check mute/solo, output bus routing and the final render’s audio settings.

TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

04 / Color page and scopes

Balance images in a repeatable node order.

01 Identify the camera color space and set a suitable input/output workflow. For an SDR web job, check that your final output is intended for SDR playback.

02 Use a first node for balancing exposure and white balance, then a separate node for the creative look. Compare shots with the waveform and visual references.

03 Toggle the grade to compare before and after. Check highlights and skin tones, then review the entire sequence for continuity.

PRACTICE DEMO

Match two angles recorded under different lighting. Save a still of the reference shot and note the changes you made.

QUICK CHECK / FAQ

If an image looks oversaturated after a conversion, check for a doubled transform or a LUT applied at more than one stage.

TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

05 / Multicam, Fusion and Deliver

Use each page for a focused finishing task.

01 Make a two-camera multicam clip and check sync at the start and end. Switch pictures without changing the chosen dialogue track.

02 Use a simple Text+ title or an existing title. If you explore Fusion, learn the flow from an input through a tool to MediaOut before adding more nodes.

03 In Deliver, set the destination and output settings, add the job to the render queue, then render. Watch the exported file from disk and verify audio and captions.

PRACTICE DEMO

Render a master and a review MP4, then compare both with the timeline. Deliver a still frame and one screenshot of your project organisation for review.

QUICK CHECK / FAQ

If the render is missing shots, verify the selected timeline and render range, and confirm that all source media are online.

TRACK 02 / EDIT TO DELIVER

DaVinci Resolve

06 / Capstone and FAQ

Finish a 45 to 60-second editorial piece.

01 Build an interview-led promo with a hook, two supporting cutaways, a lower third and one caption sequence.

02 Deliver a landscape master, a vertical derivative, a review MP4 and the requested caption format. Export a project file for handoff and provide the source media separately.

03 Reopen the project on a new location or test account where possible. Check media links, duration, audio channels and the first and last frames.

PRACTICE DEMO

Score yourself out of 10: story 3, picture consistency 2, sound 2, delivery QC 2, clean archive 1.

QUICK CHECK / FAQ

Why can’t I hear the output? Check the Fairlight bus, muted tracks and Deliver audio options. Why does a feature look different? Check your app version, OS, and Free or Studio edition.
